Profile

I'm a Senior Java Developer with over a decade of experience in automotive, fintech, and game development. Skilled in designing scalable systems, optimizing performance, and leading teams. I excel at turning complex challenges into simple, effective solutions and have a strong passion for mentoring and innovation.

Skills

Application development - Java, Spring, JPA
Design microservices architectures for cloud stack
Cross process communication with REST, SOAP
Handling event driven JMS, Kafka work loads
Design and implement RDBMS, SQL, NoSQL persistence

Hands on support frontend work in JavaScript / TypeScript
DevOps, CI/CD pipeline development
Proactive cooperation in agile scrum delivery
Assist in line management and recruitment process
Communicating with clients, delivering product demonstrations

Experience

02.2022 - Present, BNY, Senior Backend Developer, Java

- Developing REST API microservices with RDBMS Kafka/IBM MQ consumers for cash transaction monitoring
- Lead development of in private cloud and review architecture design
- Collaborate with the engineering team to design and launch new features;
- AI early adopter and GitHub Copilot Champion - cooperate with data engineer, AI Hub portal onboarding
- Mentoring and onboarding new team members

11.2020 - 01.2022, WTT, Senior Backend Developer, Java

- Developing globally available REST API with Java
- Support frontend development - React and NextJS
- Create image clustering unsupervised machine learning process to predict client platform migration costs
- System and content migrations(Java and Python) hosted in Azure and migrated to AWS
- Create release for SonarQube plugin - AEM Rules

10.2015 - 10.2020, Cognifide, Backend Developer, Java

- Developing globally available REST API with Java in AWS
- Support frontend development - Angular Framework
- Create and maintain automated tests - Java, Selenium, Cucumber
- System to system content migrations - including tools development in Groovy

02.2015 - 08.2015, Dark Stork Studios, Software Developer

- Develop launcher application in C++ and Qt Framework
- Create server script to bootstrap and maintain game servers in cloud

01.2011 - 01.2015, Roundbyte, Software Developer

- Extend car dealership management application with REST API in C++
- Develop Android tablet/mobile utility application for car dealership
- Develop a full stack application for finding obstacles and disability-friendly places.

Education

2006 – 2011 Adam Mickiewicz University in Poznań

Department: Physics

- Major: Physics
- Specialization: Computer Science

Languages

- English: B2
- Polish: Native
